**CryoUsers 2017**

**September 04 – 06 Coventry**

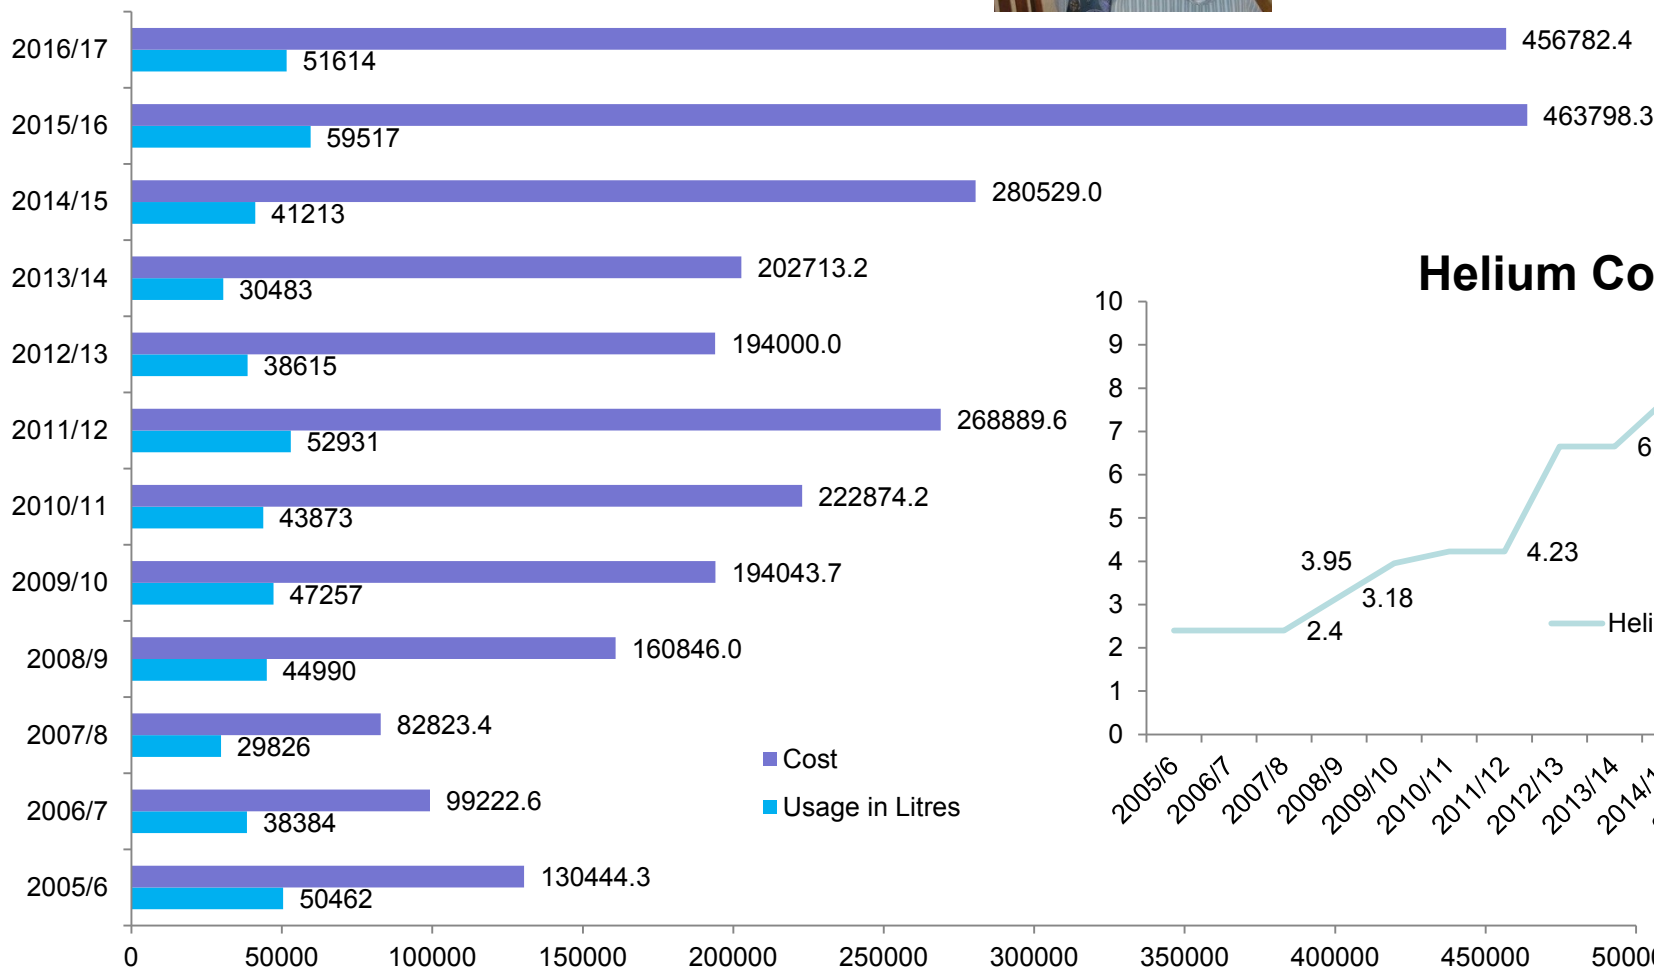

# The ISIS Helium Recovery Project

- ISIS Helium History
- Collaboration & Networking
- System Layout
- Phase 1 “The Ringmain”
- Phase 2 “Beamline connections”
- The Recovery Building
- PLC Control
- Liquefier and Savings
- Thanks & Questions

# ISIS Helium History

# Collaboration & Networking

- Collaboration with DLS
- Networking with  
ILL, HZB, CNRS, ESRF, PSI
- Consultation by Munroe Brothers  
Basic costs, P&ID, Compressors, HP Storage,  
LP Storage, Helium measurement, Valves, Suppliers
- Independent peer review of Consultation  
Eddy Lelièvre-Berna (ILL), Hamish Nichol (BOC)
- CryoUsers / He Recovery Community  
Ringmain, Gas Bags, Compressors, Filtering, HP Storage  
Liquefiers, Gas Metering, Compressor control systems  
HP Pressure Measurement & Control

## Phase 2 Beam-lines

Beamline Stakeholder Exercises  
Preferred Routes / Future Proofing  
Beamline Modifications Permits

Complete May 2015

300m 2", 150m 1" St/ Steel Pipe, 27 Recovery Panels

½" Pressure Return line across Facility

**1.75 KM of PIPE INSTALLED**

# Recovery Building

Building Total after services and fit  
out Total £100K

- Power
- UPS
- O<sub>2</sub> System
- Ventilation
- Compressed air

# PLC Control System

Mass Flow  
AliCat

## Information that we can get from PLC:

- Cryogen levels
- Cryogen usage
- Gas flow, pressure, quality
- Compression & storage
- Leak detection
- Oxygen depletion
- Alarms via SMS
- Data Record & Archive

Gas Flow

U6 (20L/P), U40 (100L/P)

Avery Techtronic Weigh Scale

Pressure Tamo MiniComb

Mettler Toledo Optical O2 Sensor (PSI)

**Collaboration with HZB & ILL Helium Management**

### R108 Helium Recovery Building Gas Handling Layout

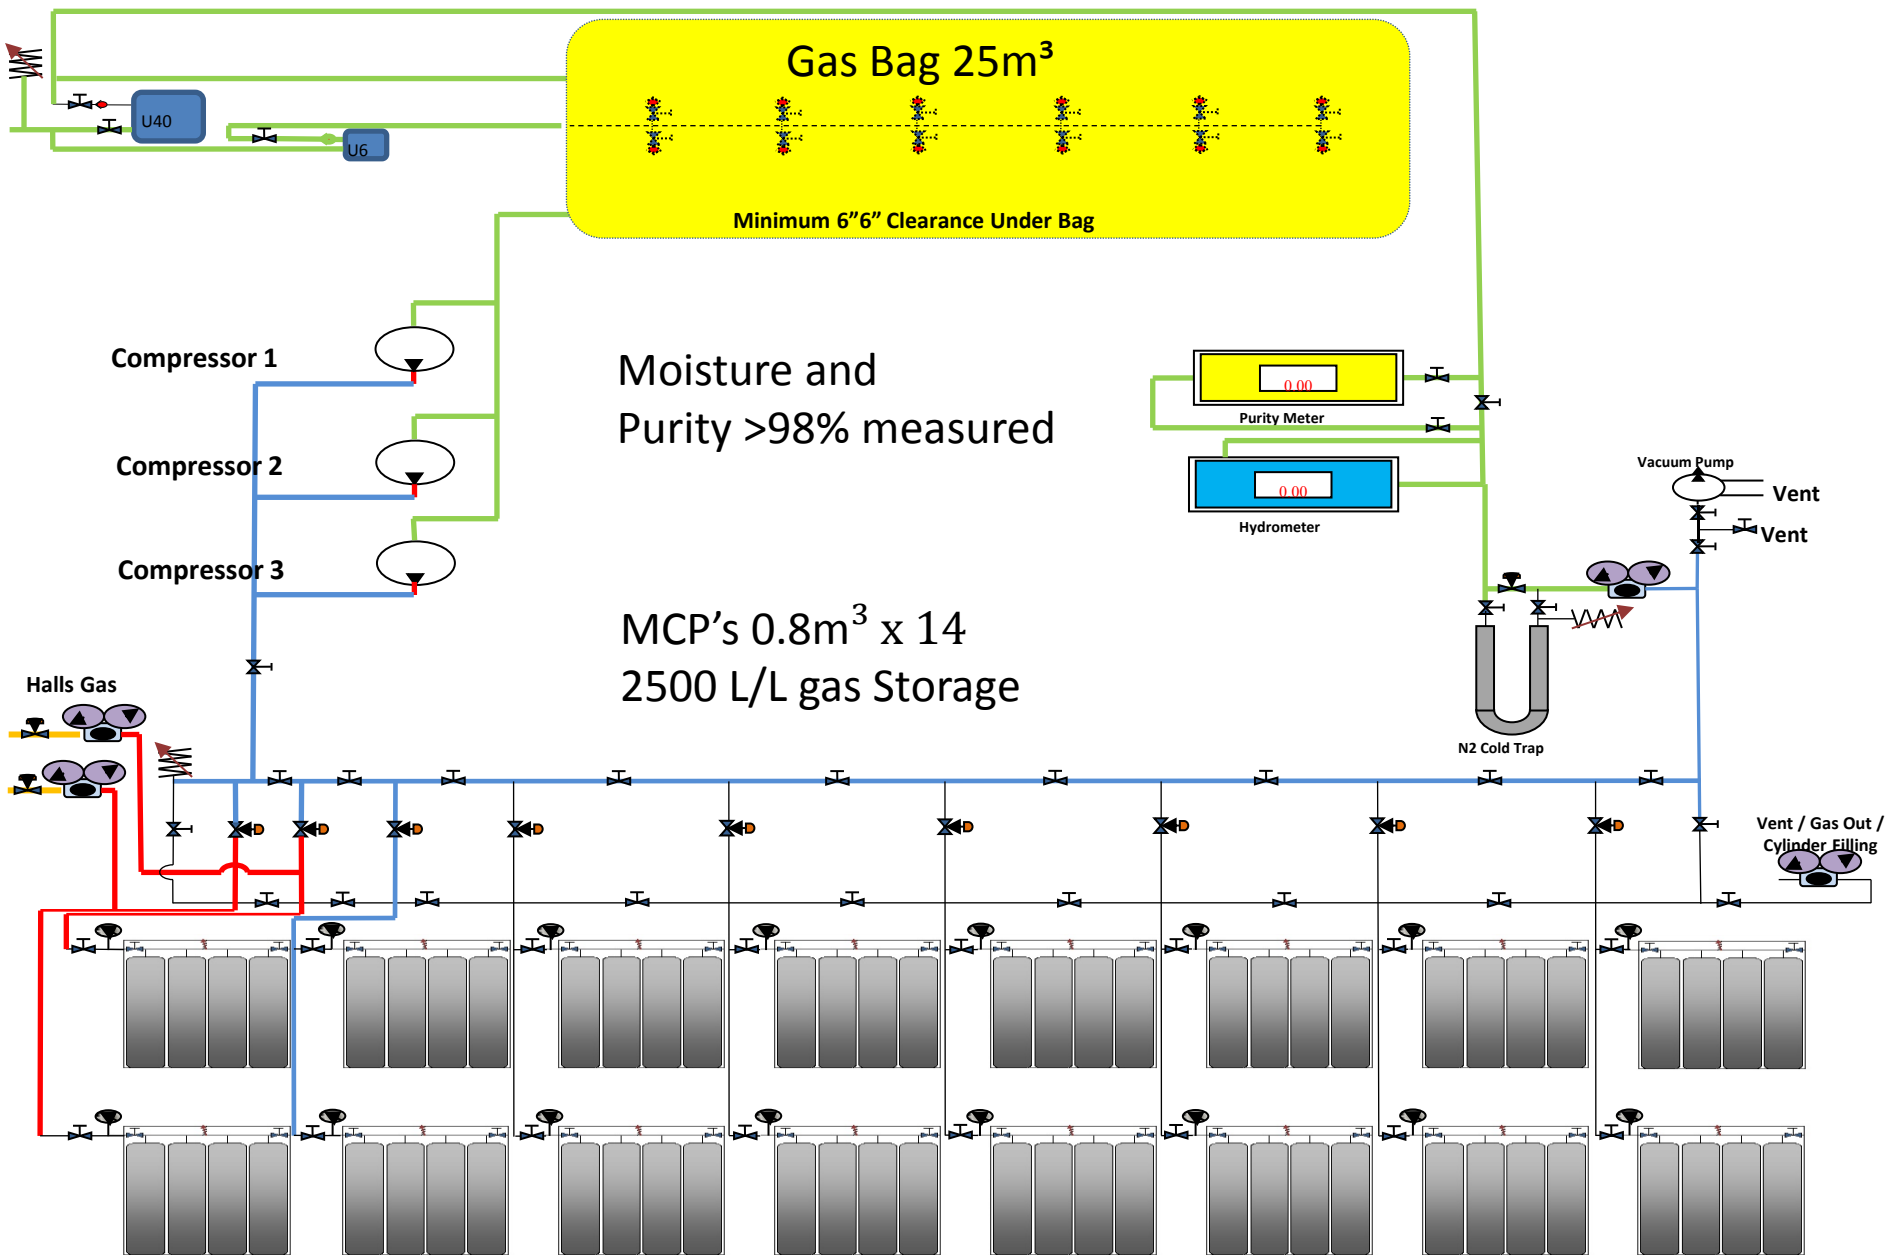

# R108 Helium Recovery Building Gas Handling Layout

# R108 Helium Recovery Building Gas Handling Layout

## Explore Options for reprocessing Gas

- Sell to third party
- Re-Use recovered Gas
- Install Liquefier

## July 2016 Grand Opening

## Helium Recovery at facilities Conference

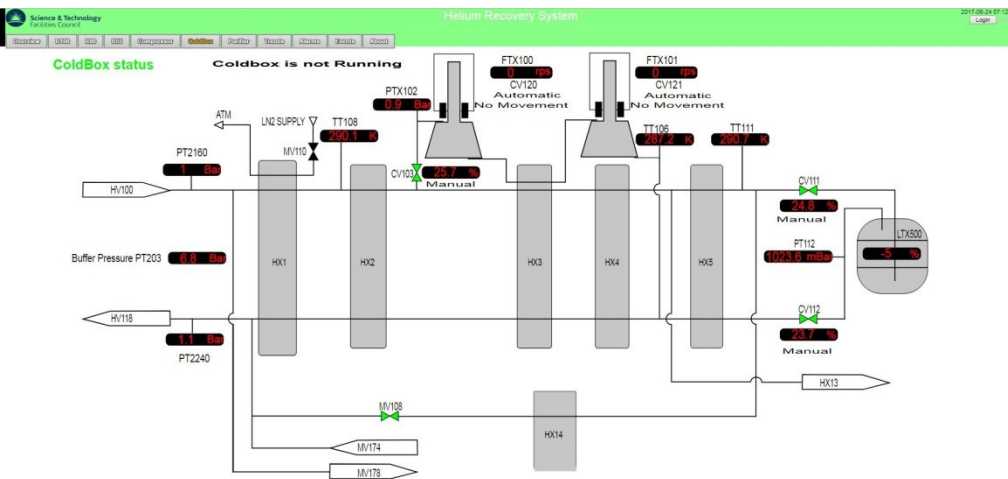

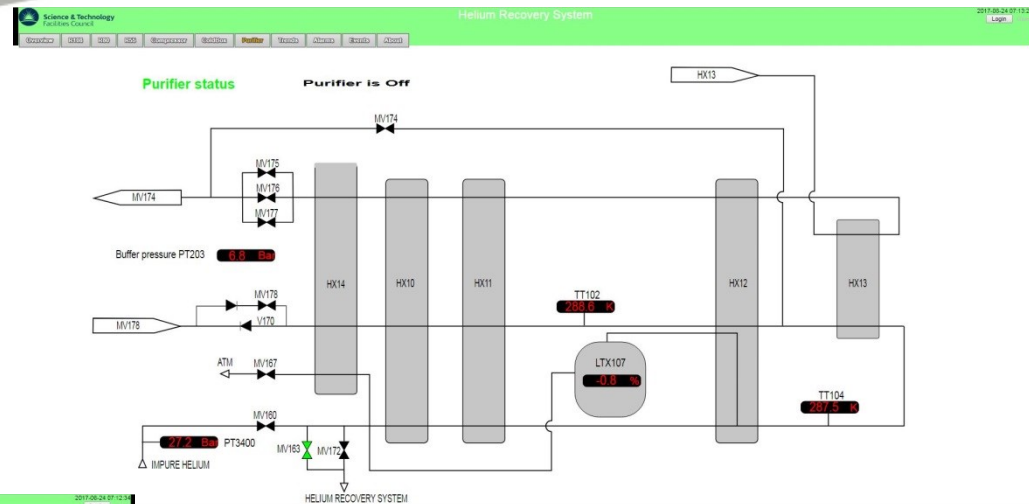

Liquefier Funding secured July 2016  
Procurement in place  
Contractor appointed  
Work to commence Sept 2016

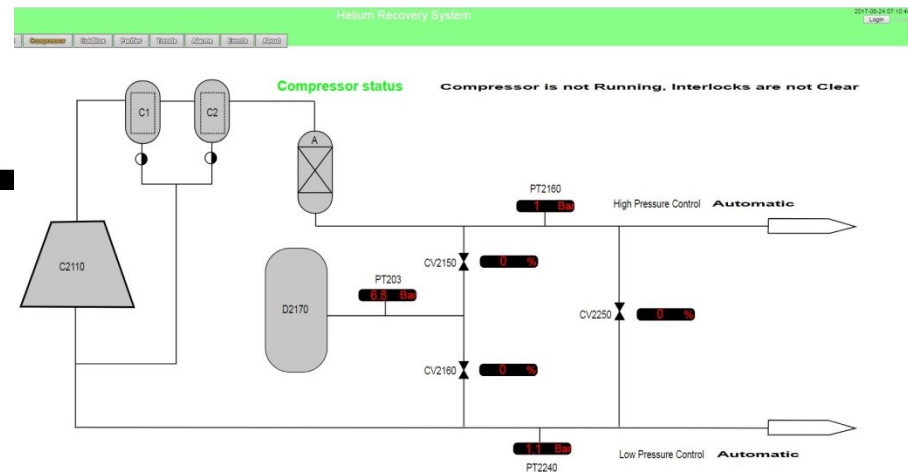

TCF 20  
18 L/H Liquid Production  
40 L/H N2 Pre-Cool

# PLC Control System

In addition to Allen Bradley System, Coldbox, Purifier & Compressor view only.

# PLC Control System

## Resupplied Gas Usage

2408.17		HELIUM CONSUMPTION					06:55:52			
TS1 VOID TOTAL CONSUMPTION		4.35776m3			TS2 EAST TOTAL CONSUMPTION		21.22874m3

## TS2 use of recycled Helium gas 2<sup>nd</sup> February 2017

Instrument support purchase of Helium Gas

	2016	2017
January	£2550	£6250
February	£7000	£71
March	£7000	£4200
April	£6200	£72

## TS1 Target Station Group use of recycled Helium Gas Cycle prior to 2017/1 late April 2017

Target Station purchase of Helium Gas

Average use TS1 Void	Current
11500 Litres gas per day (1.15 Bottles per Day)	0

## ISIS Helium Liquefier Produces Helium since 17<sup>th</sup> May

- Liquefaction rate of Linde TCF20 approximately 20 Liquid Litres per hour (480 Litres per Day)

Cryo Engineering GmbH have made improvements to our system

- Cold box heat exchanger modifications make maintenance easier
- Use of Helium transfer to transport Dewar flash gas back to Helium buffer enhances TCF20's performance up to 20%

Liquid purchase 2017/1 prior to TFC20 start up: 2440L Costing £21590

Liquid produced 2017/1 17<sup>th</sup> May – 2<sup>nd</sup> June: 3100L Saving £27400

**Initial Savings are encouraging we will get Better!!**

# Summary

7.5T of Helium could  
Recovered Annually

- Recovery system Operational
- Some additional connections needed, 3 month shutdown has highlighted losses
- Learning curve has started
- Return gas HP pipework 80%
- PLC control System Operational

## To Do

- Phase 2 complete Instrumentation
- DLS Collaboration for Helium Recovery

Additions to system will be ongoing
